

Fusion[®]

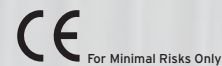

Fusion[®] is a melt resistant disposable glove made from an innovative polyamide material. Specially developed at Polyco's Research and Development Centre, Fusion[®] is the only product of its kind. Made from a polyamide material, it is able to withstand temperatures of up to 200°C without melting. It is available as a glove or a mitt, the latter of which enables it to be used as an over-glove with the Bakers Mitt[™] either for when heat protection is required or to prevent soiling. It can also be worn on either hand for added value. The Fusion[®] has been tested in accordance with EN1186 making it suitable for use with all food categories, allowing for the handling of food products prior to cooking particularly where there is a risk of touching a hot cooking surface.

Typically used for:

- Food Processing
- Fast Food Preparation

Case Quantity:

50 gloves per polybag
10 dispensers per case

Thickness: 0.025mm
(Single Wall measured at palm)
